

The compact hand auger set for geological research consists of a 60-cm long handle with a detachable grip made of synthetic material. The various types of augers have a 7-cm diameter. The set is compact and can be transported in a carrying bag.

This auger set is used to carry out manual drilling, sampling and investigation (e.g. soil horizon, geology and archaeology) in a variety of soils.

Key Features

- Compact set in one backpack: handle, extension rods and auger heads only
- Auguring up to 7 metres depth
- Bayonet connection allows fast and simple exchange of rods and auger heads
- Soil profile description and classification
- Soil sampling above groundwater table only

Applications

- Soil profile description and classification
- Soil sampling above groundwater table
- Soil sampling below groundwater table

Set contains

- Various types of soil augers
- Extension rods
- Auguring handle
- Carrying bag

Specification

Connection	Bayonet
Sample diameter	7 cm
Maximum sample depth	7 m
Sample length	10 cm
Sampler position	Vertical
Product material	Iron, other material
Sample specification	Disturbed
Package size	117 x 27 x 23 cm
Weight	17 kg
