

The one-piece gouge auger set is developed for taking samples from soft soil layers. The set consists of two different gouge augers of different lengths (50 & 100cm) but with the same diameter (25mm), packed in a strong carrying bag. The auger is made of non-toxic steel with high tensile strength. Its large diameter allows you to take nice samples from softer soils and is ideally suited for a rapid soil profiling.

Please note that the auger should not be hammered and that gouge bodies will not be filled completely in medium-harder soils.

Key Features

- Up to a depth of 1 metre
- Perfect for rapid soil profiling
- Non-toxic high tensile strength steel

Set contains

- Gouge auger, 50cm length, 30mm diameter
- Gouge auger, 100cm length, 30mm diameter
- Bent spatula
- Carry bag, 120cm length, 15mm diameter

Applications

- Soil sampling above & below groundwater table
- Archaeological soil research
- Environmental soil research
- Soil mapping
- Soil suitability reviews
- Educational purposes
- Root research
- Soil sampling for fertilisation research
- Clay distribution research
- Paleontological research

Specification	
Maximum sample depth	1 m
Product material	Iron, other material
Sample diameter	25 mm
Sample specification	Semi-disturbed
Sample length	50/100 cm
Package size	117 x 28 x 20 cm
Weight	4.5 kg
